App design: learn cybersecurity in short, clear lessons

Name is a placeholder. Look: "Blueprint" (graph paper, plain words, yellow highlighter).

Flow: Home > Map > Module > Lesson > Question > Done > Refresh later.

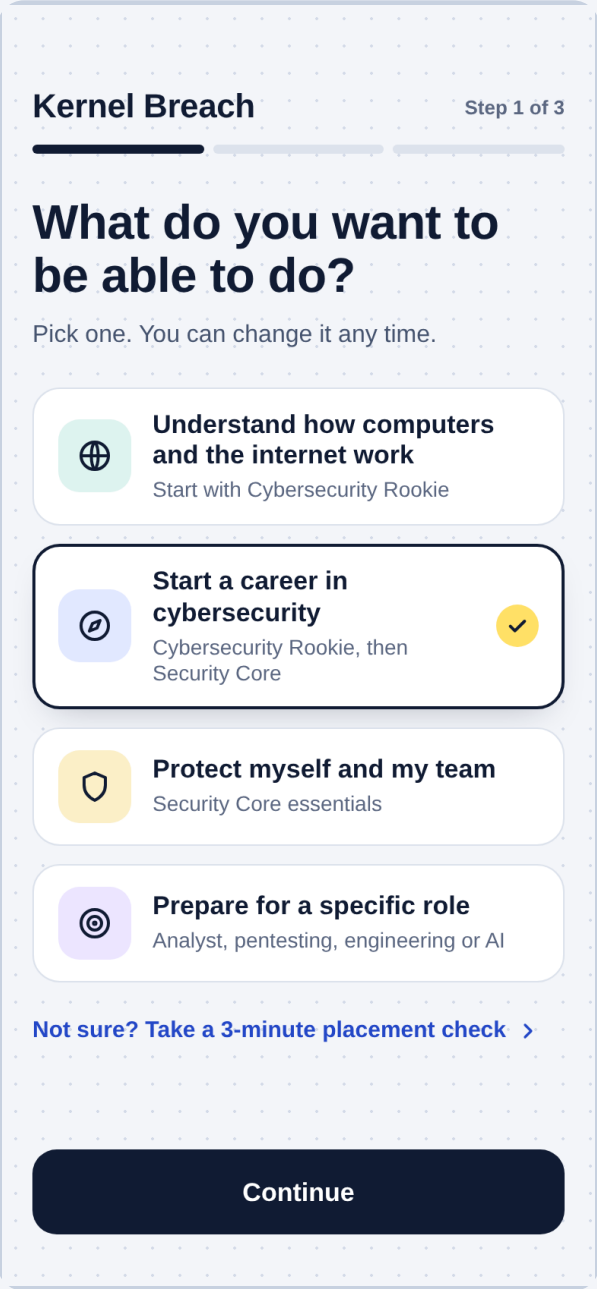

Each idea can be read three ways: Simple, Analogy or Technical.

You rate how sure you are, and that sets when the app asks again.

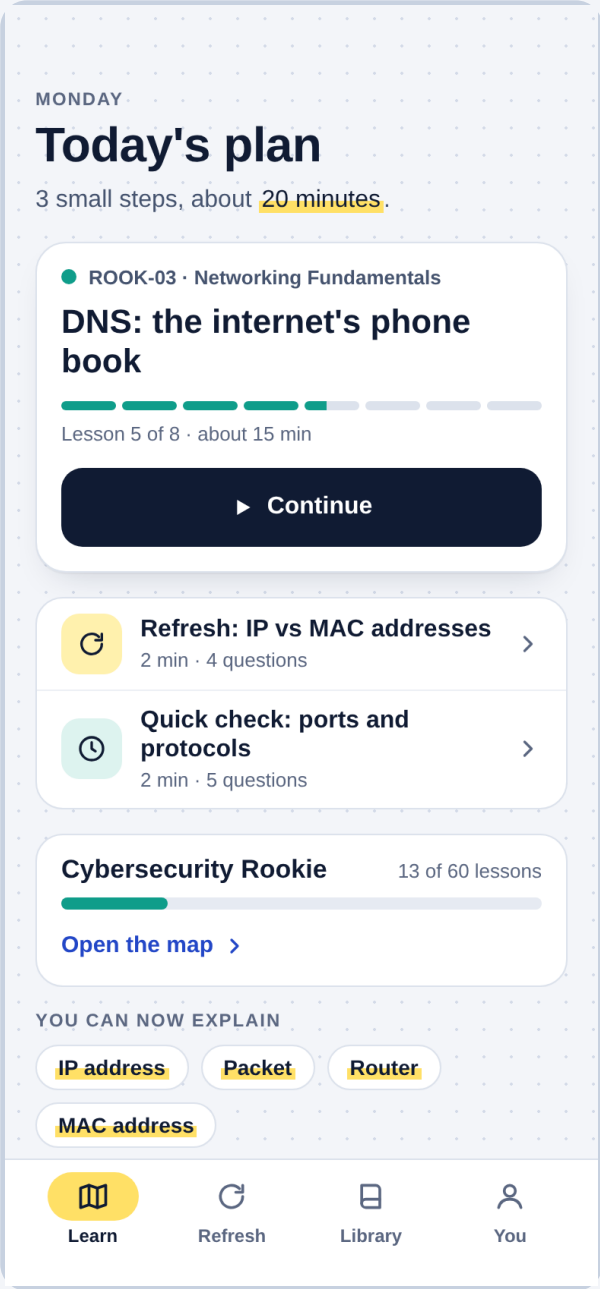

No story, no hearts, no timers. Just learning.

1 Start and find your way

Onboarding, home, the map of all paths, and a module page.

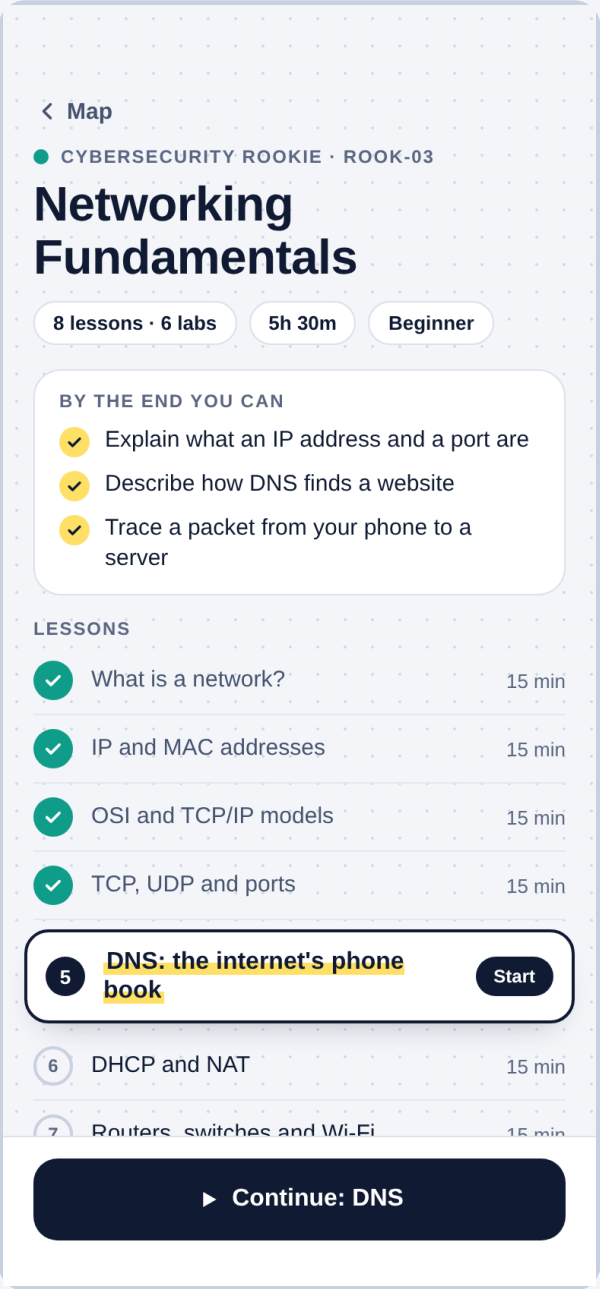

Onboarding: pick a goal

Home: today's plan

Map: every path as a line

Module: what you will learn

2 Learn it: pick your depth

One concept, three ways to read it. Tap Simple, Analogy or Technical.

STEP 1 OF 4

Your phone asks

1 Your phone example.com?

2 Resolver

3 Name server

4 Web server

You type example.com. Your phone does not know the number yet, so it asks its resolver.

[<](#)

Next step

Watch: step 1

3 Try it

Watch it step by step, then answer questions.

< Back to lesson

STEP 3 OF 4

A number comes back

1

Your phone

example.com?

2

Resolver

asking...

3

Name server

203.0.113.7

4

Web server

The name server replies with the IP address. The resolver passes it to your phone.

QUESTION 4 OF 8 · PICK ONE

Which record maps a name to an IPv4 address?

A A

B AAAA

C MX

D TXT

Right. An A record holds an IPv4 address. AAAA holds an IPv6 address.

REFRESH · 2 OF 4

IP vs MAC addresses

You learned this 4 days ago. Try to recall it first.

Which address can change when you join a different Wi-Fi network?

The IP address. The network hands you a new one. The MAC address belongs to your device's hardware.

How did that feel?

Missed it
